Subject: REquest for RUSH sequence search for case No. 10/616101

Hello Christina,

Please authorize the search request below as RUSH. The reason being this is an amended case and applicants have now included SEQ ID NO for the claimed polypeptides.

Many Thanks -Manjunath

Manjunath N. Rao, Ph.D.

Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

November 2005

Published_Applications Nucleic Acid and Published_Applications Amino Acid database searches now generate two sets of results each. The Published_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published_Applications_New databases: older published applications make up the Published_Applications_Main databases.

Searches run against Nucleic Acid Published_Applications produce two sets of results, with the extensions .rnpbm (Published_Applications_NA_Main) and .rnpbm (Published_Applications_NA_New).

Searches run against Amino Acid Published_Applications produce two sets of results, with the extensions .rapbm (Published_Applications_AA_New).

Wish of the state of the state

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                          3797

or preventing cell cycle associated disorders such as cancer

Claim 13; Fig 1; 63pp; English

This sequence encodes the Tankyrase homologue isotype 1 (TaHo-1) protein of the invention. The invention also relates to the TaHo-2 protein. The TaHo proteins are useful for inducing or preventing cell proliferation in cells, and in the study or treatment of conditions mediated by the cell cycle proteins, such as to diagnose, treat or prevent cell cycle associated disorders, preferably cancer. The TaHo conding sequences are useful as hybridisation probes, in chromosome and gene mapping and in the generation of anti-sense DNA and RNA. The coding sequences are also generation of anti-sense DNA and RNA, The coding sequences are also useful for the preparation of TaHo, for generating either transgenic and screening of therapeutically useful agents, in gene transgenic and screening of therapeutically useful agents, in gene therapy, as and screening of therapeutically useful agents, in gene therapy, as gene which encodes TaHo and for the genetic analysis of individuals with a screening of the TaHo proteins, and their coding sequences are useful in screening assays

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel recombinant nucleic acid encoding the cell cycle protein TaHo, a tankyrase H isoform. The products of the invention have cytostatic and immunostimulant activity and can be used for gene therapy and in vaccines. The cell cycle protein TaHo and the nucleic acid encoding the proteins are useful for diagnosing and treating a cell cycle related disorder, e.g. cancer, or for inhibiting growth of tumour cell. The methods are useful for screening for a bloactive agent capable of binding to a cell cycle protein tankyrase H, or a bioactive agent capable of modulating a cell cycle protein tankyrase H or PARP (poly ADP-ribose polymerase) activity. The antibodies are useful for inducing an immune response against the cell cycle proteins. This sequence encodes the tankyrase H isoform 1, TaHo-1, isolated from clone TH-1 which is described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New recombinant nucleic acid encoding a cell cycle protein, useful for diagnosing and treating a cell cycle related disorder, e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AGACAAATATTAGCTGTGAGCAGATCTTTTTTGTTGCTTCTTGTAGTCCCCCAGTTTAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method for screening a bioactive agent capabl of interfering with the binding of a tankyrase H cell cycle protein and p21. The invention is useful in gene therapy. The method is useful for screening for a bioactive agent capable of interfering with the binding of a tankyrase H cell cycle protein and p21 for preparing a composition for diagnosing or treating cancer. The present sequence is human tankyrase homologue isotype 1 (TaHo-1) DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Screening for a bloactive agent capable of interfering with the binding of a tankyrase H cell cycle protein and p21 for diagnosing or treating cancer by combining a tankyrase H cell cycle protein, a candidate bioactive agent and p21.

The invention also relates to the TaHo-1 protein. The TaHo proteins are useful for inducing or preventing cell proliferation in cells, and in the study or treatment of conditions mediated by the cell cycle proteins, such as to diagnose, treat or prevent cell cycle associated disorders, preferably cancer. The TaHo coding sequences are useful as hybridisation probes, in chromosome and gene mapping and in the generation of anti-sense DNA and RNA. The coding sequences are also useful for the preparation of TaHo, for generating either transgenic animals or knock out animals which, in turn, are useful in a development and screening of therapeutically useful agents in gene therapy, as vaccine, and for construction of hybridisation probes for mapping the genetic disorders. The TaHo proteins, and their coding sequences are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel recombinant cell cycle polypeptide, tankyrase H useful for inducing or preventing cell proliferation in cells, and for diagnosing, treating or preventing cell cycle associated disorders such as cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel recombinant nucleic acid encoding the cell cycle protein TaHo, a tankyrase H isoform. The products of the invention have cytostatic and immunostimulant activity and can be used for gene therapy and in vaccines. The cell cycle protein TaHo and the nucleic acid encoding the protein are useful for diagnosing and treating a cell cycle related disorder, e.g. cancer, or for inhibiting growth of tumour cell. The methods are useful for screening for a bloactive agent capable of binding to a cell cycle protein tankyrase H, or a bioactive gent capable of modulating a cell cycle protein tankyrase H or PARP (poly ADP-ribose polymerase) activity. The antibodies are useful for inducing an immune response against the cell cycle proteins. This sequence encodes the tankyrase H isoform 2, TaHo-2, isolated from clone K23 which is described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    for

The invention is useful in gene therapy. The method is useful for screening for a bioactive agent capable of interfering with the binding of a tankyrase H cell cycle protein and p21 for preparing a composition for diagnosing or treating cancer. The present sequence is human tankyrase homologue isotype 2 (TaHo-2) DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Screening for a bloactive agent capable of interfering with the binding of a tankyrase H cell cycle protein and p21 for diagnosing or treating cancer by combining a tankyrase H cell cycle protein, a candidate bloactive agent and p21.

The invention relates to a recombinant polypeptide (I) such as cell cycle protein e.g. tankyrase homologue (TaHo), comprising an amino acid sequence having 85% or more sequence identify to the 1065 amino acid sequence of ADY97761 or the 1240 amino acid sequence of ADY97762. Also described: (1) diagnosing cancer, which involves determining the activity of (I) fixom a test sample of an individual and comparing the level with a control, (2) treating (M1) an individual with a cell cycle related disorder, which involves administering to the individual an inhibitor of TaHo; (3) a recombinant nucleic acid (II) encoding (II), comprising a nucleic acid that hybridizes under high stringent conditions to a sequence complementary to the 3797 base pair sequence of ADY97760, or a nucleic acid having 85% or more sequence identity to ADY97760, or a nucleic acid having 85% or comprising (III) comprising (III) operably linked to regulatory sequences recognized (III) comprising (III) or (IIII); (6) producing (I); (7) a polypeptide that comprising (III) binds to (1); and (8) inhibiting (M2) growth of a tumor specifically binds to (1); and (8) inhibiting (M2) growth of a tumor cell, involves contacting the tumor with a bioactive agent capable of

inhibiting TaHo activity. (I) is useful for screening a bloactive agent capable of modulating (I), or screening for agents capable of interfering with the binding of (I) and P21. (M1) is useful for treating an individual with a cell cycle related disorder. (M2) is useful for inhibiting growth of a tumor cell by a bloactive agent e.g. antisense oligonuclectide. The present sequence encodes the human tankyrase homologue isotype 2.

```
The present sequence is a version of the human tankyrase II coding sequence. Its protein is thought to be involved in signal transduction in the cell, and to have binding activity for other telomere-associated proteins. It is possible that it plays a role in the regulation of telomere length, thus affecting the replicative ability of the cell. The protein is useful for ribosylating target proteins, for determining tankyrase II binding activity in a sample, and for modulating telomere
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel mammalian Tankyrase II polypeptide and the polynucleotide encoding the polypeptide useful for modulating or maintaining telomere length, replicative capacity, apoptosis, chromosome packing or gene expression.

an ANK domain composed of ankyrin repeats. SPANK is a cytosolic protein which can polytyADP-ribosyl) are itself. SPANK binds insulin-responsive cubich can polytyADP-ribosyl) are itself. SPANK binds insulin-responsive minopeptidase (IRAP) and modulates translocation of GLUT4 in the perinuclear region of adipocytes. It is an effector in the insulin signalling pathway in eukaryotic cells. SPANK is useful for reducing body cass, reducing glucose intolerance or insulin resistance, for preventing cor treating obesity-related diseases or disorders, such as obseity, cardiac insufficiency, coronary insufficiency, stroke, hypertension, atheromatous disease, atherosclerosis, high blood pressure, non-insulin dependent diabetes, hyperlipidaemia, hyperuricemia and Syndrome X and is also useful for preventing or treating muscle-related diseases or disorders, such as muscular dystrophy, muscle atrophy and muscle fatigue. Antibodies immunospecific for SPANK are useful for detecting the presence CS of SPANK polypeptide in a biological sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TAAGAACAGGGTTGAAGTATGTTCTTCTTTAAGTTATGGTGCAGACCCAACACTGCT 1122

The present invention provides the protein and coding sequence for the human tankyrase2 protein. This is found in two different versions, designated TANK2-LONG and TANK2-SNORT. Tankyrase2 has polyADP-ribosylation activity and is involved in the modification of TRF1, which is a telomere-specific binding protein. The regulation of telomere
